#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 31-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugawara et al. (5,829,219) in view of Miyazaki et al. (4,883,310).

Sugawara et al. disclose a vehicle roof frame comprising side frame members (12) and cross members (14). The side frame members (12) have protrusions (15) that have an upper portion with a corrugated configuration. The cross members (14) have corrugated end portions (23) that receive the protrusions (15). The end section of the cross members (14) and the upper portion of the protrusions (15) have matching shapes that align. The cross members and the protrusions are connected together by fasteners, beads of welding.

However, Sugawara et al. do not disclose the fasteners to be releasable and reattachable.

Miyazaki et al. teach connecting a cross member (25) to a protrusion (39) of the side frame member (23) by releasable and reattachable fasteners, bolts (47,63) and nuts.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to connect the cross member end portions to the protrusions, both of Sugawara et al., with bolts and nuts, as taught by Miyazaki et al., to provide a releasable and reattachable connection to increase assembling efficiency, improve appearance, and well suited for manufacture and assembly using robots.
